

Program

```
import java.io.BufferedReader;
import java.io.IOException;
import java.io.InputStreamReader;
import java.net.HttpURLConnection;
import java.net.URL;

public class SimpleWebClient {

    public static void main(String[] args) {
        // Replace this URL with the desired web page URL
        String url = "http://example.com";

        try {
            // Create a URL object
            URL obj = new URL(url);

            // Open a connection to the URL
            HttpURLConnection connection = (HttpURLConnection)
obj.openConnection();

            // Set the request method to GET
            connection.setRequestMethod("GET");

            // Get the input stream from the connection
            BufferedReader in = new BufferedReader(new
InputStreamReader(connection.getInputStream()));

            // Read and print the response
            String line;
            while ((line = in.readLine()) != null) {
                System.out.println(line);
            }

            // Close the input stream
            in.close();

        } catch (IOException e) {
            e.printStackTrace();
        }
    }
}
```

Output

```
<!doctype html>
<html>
<head>
  <title>Example Page</title>
</head>
<body>
  <h1>Hello, this is an example page!</h1>
  <p>Welcome to my simple webpage.</p>
</body>
</html>
```
